                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        University of Washington,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.

All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.
                                                                                                  ACO98613 185437 bp DNA linear PRI 01-AUG
Homo sapiens chromosome 3 clone RP11-24F11, complete sequence.

N

The invention relate to a method of diagnosing (MI) non-blood disease such as solid tumor by providing peripheral blood sample of human having con-blood disease, and comparing an expression profile of specific genes in the peripheral blood sample to reference expression profile of the genes, where each of the genes is differentially expressed in peripheral blood monounclear cells (PBMCs) of patients having the disease as compared to PBMCs of normal humans. The method is useful for diagnosing non-blood disease such as solid tumor. The solid tumor is chosen from con-blood disease such as solid tumor. The solid tumor is chosen from arcinoma (RCC), prostate cancer and head/neck ancer. The peripheral blood sample (claimed). (MI) is useful for identifying sample is a whole blood sample (claimed). (MI) is useful for identifying genes that are differentially expressed in peripheral blood samples is solated at different solid tumors. This sequence corresponds to a gene that is sland or other solid tumors. This sequence corresponds to a gene that is differentially expressed and detected by the method of the invention. (Note: this sequence is not given as part of the printed specification but was obtained from MIPO in electronic format at

Claim 7; SEQ ID NO 13; 145pp; English.

The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual, so nucleic acids, where the presence of the SNP is correlated with an or altered risk for myocardial infarction in the individual. The invention further comprises an isolated nucleic acid molecule comprising at least currenter comprises; an isolated nucleic acid molecule comprising at least B contiguous nucleotides where one of the nucleotides is an SNP given in the specification; an isolated polypeptide caid sequence given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an inthe specification; an integen-binding of ragment; an amplified polymucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in capacitication and which is between about 16 and 1000 nucleotides in contributed by a kit for detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and control of contenting an applituance of the invention may be used in gene therapy. The composition for treating of the invention may be used in gene therapy. The composition for treating or preventing myocardial infarction. This composition for treating or preventing myocardial infarction. This composition for treating or preventing myocardial infarction. This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the MIPO website.

ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to ABB85003. The PRO proteins and polynucleotides have cardiant, cytostatic, antiangiogenic, hypotensive, vulnerary and antiarteriosclerotic activities, and can be used in gene therapy. The PRO polynucleotides, proteins, agonists and antagonists are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder in a mammal, e.g. cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rhemmatoid arthritis, angina, myocardial infarctions, thromophlebitis, lymphangitis, tumour anging, may beast carcinoma and liver carcinoma) and wound healing. The PRO polynucleotides have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. ABL88259 to ABL8826, represent primers and probes used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 GGAGCTCAGCCCAGTGGGCAGTCTGAAGATGGCCAATTACACGCTGGCACCAGAGGATGA 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, mycoradial infarctions, thrombophlebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver cardinoma) and wound healing. The present sequence is a coding sequence of the invention

The invention relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, cor has cardiac hypertrophy, trauma, a cancer, or age-related macular or preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular can elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial call growth in a mammal. PRO21 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO1499 is used to stimulate angiogenesis. A PRO polypeptide, given in the specification, or an agonist is used to induce endothelial call apoptosis. A PRO selmulate or inhibit smooth muscle call growth, or to induce endothelial call and the control or stimulate or inhibit smooth muscle call growth, or to induce endothelial call and the specification or an agonist is used to call growth and the specification or an agonist or to induce endothelial call and the specification or an agonist or to induce endothelial call and the specification or an agonist or to induce endothelial call and the specification or an agonist or to induce endothelial call and the specification or an agonist or to induce endothelial call and the specification or an agonist or to induce endothelial call and the specification or an agonist or to induce endothelial call and the specification or an agonist set to induce endothelial call and the specification or to induce endothelial call and the specification or to induce endothelial call set to the specification or to induce endothelial call set to the specification or to induce endothelial call set to the specification or to induce endothelial call set to the specification or to induce endothelial call set to the specification or to
New isolated nucleic acid encoding a secreted and transmembrane polypeptide for treating a cardiovascular, endothelial, or angiogenic disorder in a mammal, such as cancer or age-related macular degeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Stephan JF;

transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, a agonist or antagonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, preferably a human. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial hypertrophy. PRO1376 or PRO149 is used to stimulate angiogenesis. PRO4302 or an agonist is used to stimulate angiogenesis. PRO4302 or an agonist is used to stimulate angiogenesis. PRO4302 or an agonist is used to induce eardiac stimulate or inhibit smooth muscle cell growth, or an agonist is used to induce endothelial eliminate or inhibit smooth muscle cell growth, or to induce endothelial eliminate or inhibit smooth muscle cell growth, or to induce endothelial eliminate or inhibit smooth muscle cell growth, or to induce endothelial eliminate or inhibit smooth muscle cell growth, or to induce endothelial eliminate or inhibit smooth requence represents a CDNA encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ccccratriarirriacarrictcrargiccaargagaaaaacacraaggricagga 720

The invention relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antegonist, is used to treat a cardiovascular, endothelial, or angiogenic disorder in a mammal, or has cardiac disorder in a mammal, or has cancer or age-related macular degeneration. The human may have suffered a myocardial infarction or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial chypertrophy. PRO1376 or PRO149 is used to stimulate angiogenesis. Chypertrophy. PRO1376 or PRO149 is used to stimulate angiogenesis. Chypertrophy. PRO1376 or paged to induce endothelial cell apoptosis. A PRO polypeptide, given in the specification, or an agonist is used to stimulate or inhibit smooth muscle cell growth, or to induce endothelial cell the endothelial cell the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             289 ATATGATGTCCTCATAGAAGGTGAACTGGAGGGGATGAGGCAGAGCAATGTGACAAGTA 348

The invention relates to an isolated nucleic acid encoding a secreted and transmembrane polypeptide (PRO). The nucleic acid, a polypeptide encoded by the nucleic acid, or an agonist or antagonist, is used to treat a cardiavascular, endothelial, or angiogenic disorder in a mammal, or has cardiac hypertrophy, trauma, a cancer, or age-related macular degeneration. The human may have suffered a myocardial infarction or has cardiac hypertrophy is characterised by the presence of an elevated level of PGF-2 alpha. A PRO polypeptide, given in the specification, or an agonist is used to inhibit or stimulate endothelial chypertrophy. PRO1376 or PRO21 or an agonist is used to induce cardiac hypertrophy. PRO1376 or PRO449 is used to stimulate angiogenesis. PRO4302 or an agonist is used to induce endothelial cell apoptosis. A PRO polypeptide, given in the specification, or an agonist is used to cardiac collypetide, given in the specification, or an agonist is used to cardiac cell tube formation. The present sequence represents a cDNA encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Goddard A;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
inducing cardiac hypertrophy, cell apoptosis or cell tube formation and stimulating angiogenesis or smooth muscle cell growth by administering polypeptides of the invention. The PRO polypeptides and polymucleotides are useful for treating cardiovascular, endothelial or angiogenic disorders, e.g. myocardial infarction, cardiac hypertrophy, trauma, cancer or age-related macular degeneration. The PRO polymucleotides are useful as hybridisation probes in chromosome and gene mapping and in generating antisense RNA and DNA, and for chromosome identification and tissue typing. The PRO polypeptides and polymucleotides are also useful in gene therapy and as molecular weight markers for protein electrophoresis purposes. This sequence represents a human PRO polymucleotide of the invention.

(GETH) GENENTECH INC.

Baker KP, Ferrara N, Gerber H, Gerritsen ME, Goddard A; Godowski PJ, Gurney AL, Hillan KJ, Marsters SA, Pan J, Stephan JF; Watanabe CK, Williams PM, Wood WI, Ye W;

WPI; 2004-225727/21. P-PSDB; ADK82794.

New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO20080 or PRO21383, useful in molecular biology, chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy.

Claim 2; SEQ ID NO 15; 494pp; English.

The invention relates to human PRO polypeptides and the PRO polynucleotides encoding them. The invention also relates to treating cardiovascular, endothelial or angiogenic disorders in mammals, inhibiting endothelial or angiogenic disorders in mammals, inhibiting endothelial cell growth, stimulating endothelial cell growth, stimulating endothelial cell growth, stimulating angiogenesis or smooth muscle cell growth by administering polypeptides and polypeptides and polypeptides of the invention. The PRO polypeptides and polynucleotides are useful for treating cardiovascular, endothelial or angiogenic disorders, e.g. myocardial infarction, cardiac hypertrophy, trauma, cancer or age-related macular degeneration. The PRO polypucleotides are useful as hybridisation probes in chromosome and gene mapping and in concern or age related macular degeneration. The PRO polymucleotides are also useful in gene therapy and as molecular weight markers for protein in gene therapy and as molecular weight markers for protein in gene therapy and as molecular weight markers for protein collectoride of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at equate the patent is sequence.

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibody against a particular GPCR, and in the production of specific contibods. The peptides and antibodies are useful for disgnosting and designing drugs for GPCRs and antibodies are useful for disgnosting and designing drugs for GPCRs and antibodies are useful for disgnosting and designing drugs for creating immune-related disease, immunological-related disease, cell proliferative diseases, or autoimmune diseases, growth-related disease, cancering in a section or viral infections, atherosclerosis, bacterial, fungal, protozoan or viral infections, of setoatthrities, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophremia, dementia, mental retardation, memory and antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                loss, epilopsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPGKB are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention

This invention relates to a method of differentially modulating the growth or differentiation of blood endothelial cells (BEC) comprises contacting endothelial cells with a composition comprising an agent that differentially modulates blood or lymphatic composition comprises contacting man agent that differentially modulates blood or lymphatic endothelial cells. Treating hereditary lymphoedema comprises and with a mutation in at case one allele of a gene encoding a LEC protein, where the mutation in at least one allele of a gene encoding a LEC protein, where the mutation in a correlates with lymphoedema in human subjects, and with the proviso that composition comprising a lymphatic growth agent selected from VEGF-C or VEGF-D polypeptides and polymucleotides. The invention may be useful for the development of compounds with an antiangiogenic, cytostatic, vasotropic or antiinflammatory activity or for gene therapy. The method is useful in modulating the growth or differentiation of blood endothelial cells or lymphatic endothelial cells, in treating hereditary lymphoedema, in screening for an endothelial cells, in treating hereditary cyclopicament for the disorder or in monitoring the efficacy or toxicity of a drug on endothelial cells. The agent is useful in manufacturing a medicament for the treatment of the disorder or in monitoring the efficacy or toxicity of a drug on endothelial cells manufacturing a medicament for the treatment of hereditary lymphoedema resulting from a mutation. The lymphatic growth agent may also be used in manufacturing a medicament for the treatment of hereditary lymphoedema resulting from a mutation. The lymphatic growth agent may also be used in manufacturing a compact or of other diseases and cancer metastasis via the lymphatic compact or of other diseases and cancer metastasis via the lymphatic compactors. The present sequence is that of a human LEC/BEC differentially experient sequence is that of a human LEC/BEC differentially experient sequence does not appear in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CCAGTGGGCAGTCTGAAGATGGCCAATTACACGCTGGCACCAGAGGATGAATATGATGTC 298

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel isolated nucleic acid and the PRO
polypeptide encoded by it. A protein of the invention has
antinifiammatory, antilarthritic, antirheumatic, immunosuppressive,
corecopathic, antidiabetic, dermatological, antipsoriatic, antiallergic,
antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide
cof the invention may have a use in gene therapy. The PRO polypeptide, its
cof the invention may have a use in gene therapy. The PRO polypeptide, its
cagonist, antagonist, or antibody that specifically binds to the
polypeptide is useful for treating an immune related disorder such as
colypeptide is useful for treating an immune related disorder such as
systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
idvopathic inflammatory myopathy, Sjogren's syndrome, systemic
clopathic inflammatory myopathy, Sjogren's syndrome, systemic
thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal
disease, a demyelinating disease of the central or peripheral nervous
system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome,
cof elecancy demyelinating polyneuropathy, Guillain-Barre syndrome,
disease, infectious or autoimmune chronic active hepatitis, primary
clisease, infectious or autoimmune chronic active hepatitis,
chiliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis,
inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's

This invention relates to a novel method for determining whether an individual is predisposed to inflammatory bowel disease (IBD), preferably to ulcerative collitis. Specifically, it refers to the identification of single nucleotide polymorphisms (SNPs) in the CCRL2 polymucleotide or chemokine (C-C motif) receptor—like 2 protein that is also known as HCR. The present invention describes methods for preventing or treating IBD, as well as diagnosing a predisposition to the disease by use of probes, primers and antibodies that can detect and amplify the CCRL2 SNP regions. Furthermore, it provides a screening assay for agents that can be used to identify individuals with a genetic predisposition and in turn be used for gene therapy purposes. The pharmaceutical compositions derived for gene therapy purposes. The pharmaceutical compositions derived for generic six the human CCRL2 cDNA of the invention. NOTE: This sequence sequence is the human CCRL2 cDNA of the invention. NOTE: This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  358

Human pulmonary and inflammatory target DNA #259 BP. DNA; 143040 (first entry) ABD20648 standard; 29-JUL-2004 ABD20648 RESULT 15 2 ******

respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallersic; antiinflammatory; antiastmatic; analysesic; hypotensive; immunosuppressive; cytostatic; cystic fibrosis; beta adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory diserses syndrome; allersic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ds. ä Aguilar Pabalan J, щ Katz ŝ Li Y, Sandrasagra A, Tang L, Shahabuddin 23-APR-2002; 2002WO-US013143. 24-APR-2001; 2001US-0286036P. (EPIG-) EPIGENESIS PHARM INC. WPI; 2003-093058/08. WO200285309-A2. Homo sapiens 31-OCT-2002 Nyce JW, 1 Miller S,

Pharmaceutical composition for treating asthma, has antisense oligonuclectide containing less percentage of adenosine, targeted toucleic acids associated with lung airway or lung dysfunction, and Claim 15; SEQ ID NO 12041; 763pp; English nucleic acids associat bronchodilating agent.

This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating comprising oligonucleotides, effective for alleviating comprising oligonucleotides, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating content of a target polypeptide associated with lung airway or lung airwaton or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or maligant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or bronchoconstriction and/or lung or administered composition, and/or bronchoconstriction, respiratory distress syndrome, pain, cystic fibrosis, allergic rhintis, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system composition and unwanted effects due to it the adenosine into the system composition and unique to it the eligonucleotides into product of the cit in the target RNA serves to prevent the breakdown of the edgradation and unique to it in the target RNA serves to prevent any u
